

WEB DESIGN/DEVELOPMENT PRODUCTION TEST

To help us assess your skills and problem solving methods, please build a one page website featuring (at minimum) the following:

- At least one simple JavaScript interaction (e.g. an accordion, a slider, etc.)
- At least one simple CSS animation
- A mobile responsive/device agnostic design, including a collapsing menu
- At least one multi-column section (2 or more columns)
- The website must have a sticky footer of some type
- A simple form (it doesn't have to send an email, but it should return a message of some kind on submit)

The contents of the website can be anything you like. Please do not use a framework like Bootstrap or the JQuery library as we are trying to evaluate your fundamental HTML, CSS and JavaScript knowledge. This test is completely open book - you may google anything you like and you have 48 hours from the time you are issued the test to return your files.

You will be evaluated on:

- Visual design and UI/UX
- Typography and use of white space
- Formatting, tidiness, and semantics of your HTML/CSS/JS
- Functionality of your website
- Creativity
